Learn how Lean/Six Sigma helps people apply improvement principles in HSE, HR, Purchasing, IT, manufacturing, Finance, supply chain and many other areas.

This discussion will explore some lean and six sigma fundamentals and give you a chance to practice finding waste and value. To do so, the discussion will cover:

- What is lean? Six sigma?
- What adds value and what's waste?
- What 7 wastes can you find in a non-manufacturing setting? How can you find waste in any process?
- What are some examples of lean/six sigma EHS applications?
- What steps are used to try these principles?
- What tips can help you avoid problems?

BIOGRAPHY
