

Environmental Engineer, Air Specialist

Dynamac, an experienced NASA/AF contractor with over 25 years of experience supporting mission critical systems for NASA, the USAF, and other government agencies, is actively seeking an Environmental Engineer to support our Cape Canaveral, Florida operation. This position will be responsible for assuring compliance with federal and state air quality and other environmental regulations, the NEPA process, natural resource issues, and historic and cultural resources in support of the Institutional Support Contract and NASA's Environmental Management System. The specific duties include:

- Provide technical expertise in Title V and NESHAPS Air Pollution regulations
- Provide technical expertise in compliance with Florida's Accidental Release Prevention and Risk Management Planning requirements.
- Ensure that ISC participates in and complies with the NASA and AF Air Emissions programs.
- Support development and preparation of environmental assessment documentation
- Collect information for the KSC Title V annual reports and prepare response to the NASA and AF data calls.
- Participate in programmatic working groups and meetings (NASA and AF)
- Conduct ISO 14001 conformance audits.
- Assist with assessments of potential conflicts with natural and historic and cultural resources.
- Other duties as designed.

Minimum Education:

BS Degree in Engineering or related field is required

Dynamac offers competitive salaries and an excellent employee benefits package. To apply, please submit a resume by close-of-business **11/7/08** by email : HR2008@dynamac.com or fax (321-867-2502) or mail to:
